## Parts

### Descriptions

1 – Good & Bad Locations

### Instructions

- The Coordinator needs to be placed as high up as possible.
  - Higher the location above the devices, the better the signal strength.
- Place the Coordinator on a Wall Vertically .
- Place the Coordinator on the Ceiling Horizontally.
- Do not place the Coordinator on a desktop or other low surface.
  - Signal strength will be very weak and cause issues.

# Network Coordinator

## Installation

### Parts

### Descriptions

- 1 – Screw Locations
- 2 – Velcro Location

### Instructions

- To mount the Coordinator on a surface, the pre-made holes on the device can be used to screw/anchor it to the wall.
- As the Coordinator does not have a large weight, a Velcro strip attached to the back of the device will work.

# Network Coordinator
